

Monge's Problem:

(Continuous / general version)

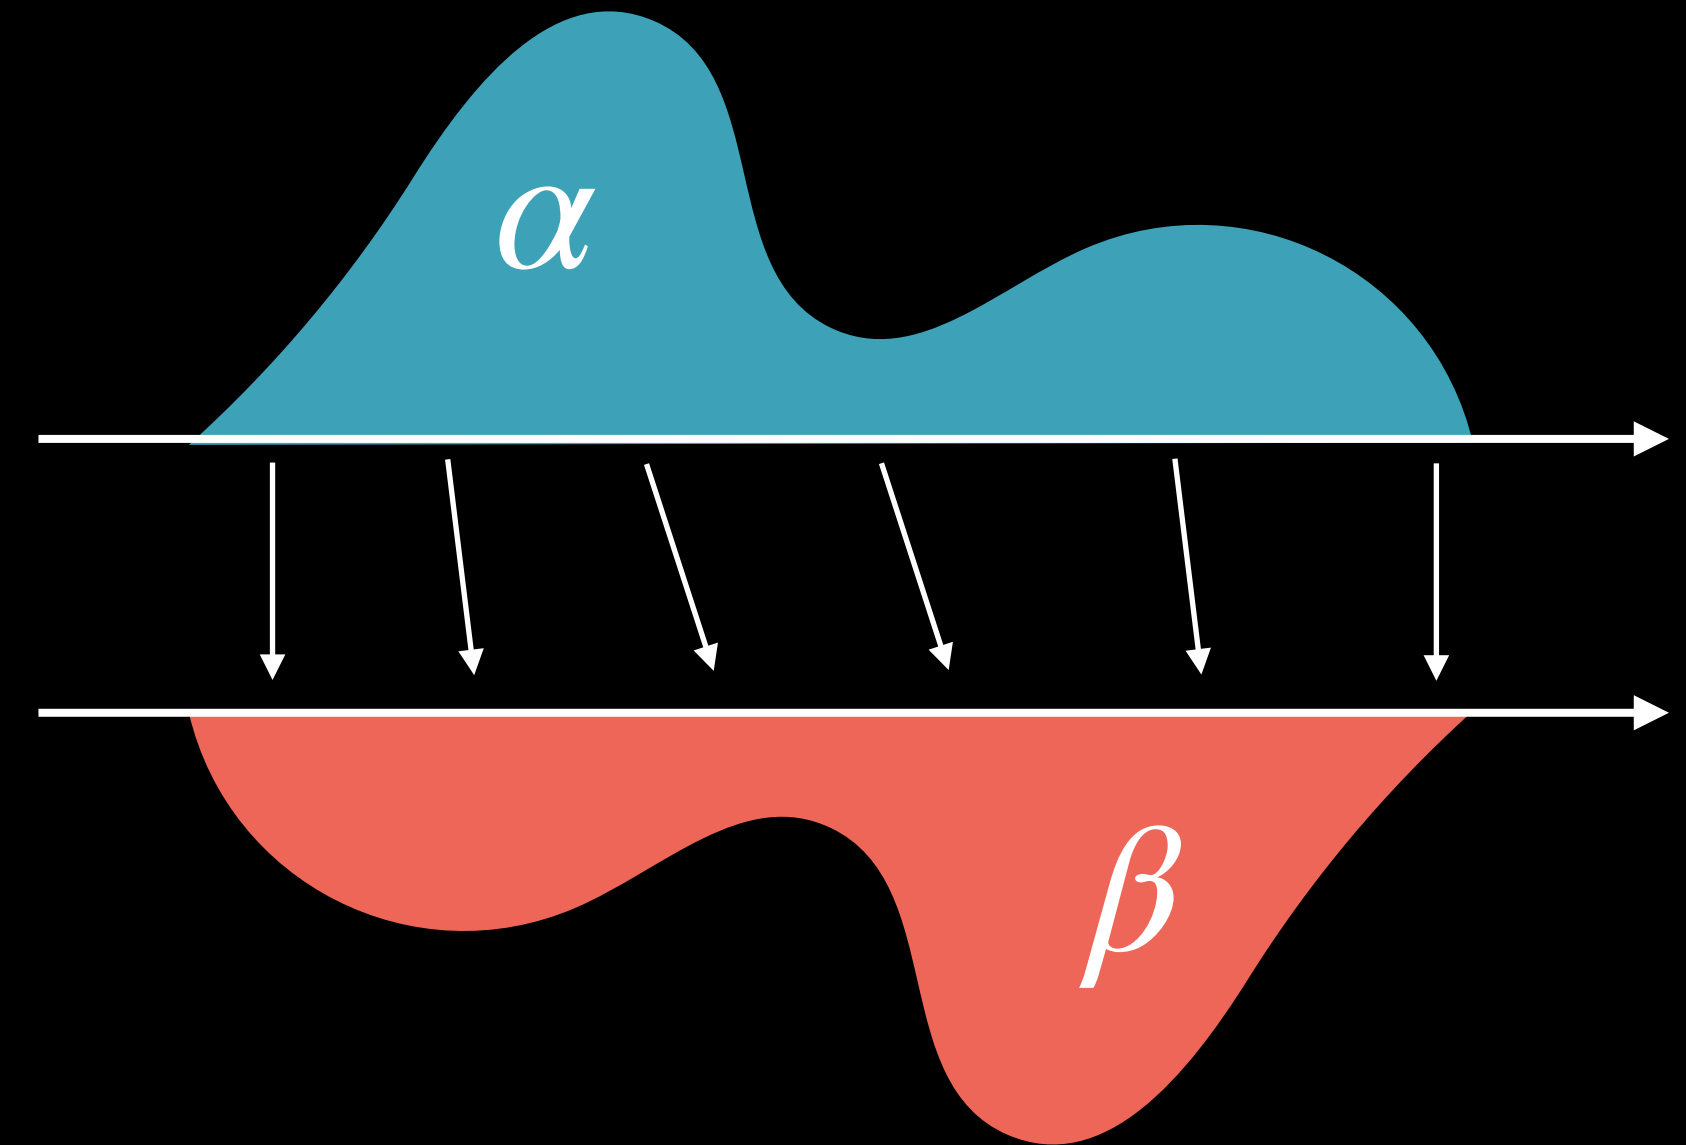

$$\min_{\beta=T_{\#}\alpha} \int_X c(x, T(x)) d\alpha(x)$$

Monge Formulation - General

Measures $\alpha, \beta \in \mathcal{M}(X)$.

A mapping T is valid transport map if it pushes forward α onto β .

We want the min-cost one:

Monge's Problem:

(Continuous / general version)

$$\min_{\beta=T_{\#}\alpha} \int_X c(x, T(x)) d\alpha(x)$$

Properties of Monge Problem
