

Densities of Two 1D Gaussians with Empirical Samples

Comparing OT, OT_ϵ , SD_ϵ

$$\alpha \equiv \mathcal{N}(0,1)$$

$$\beta = \mathcal{M}(\Delta, 1)$$

Toy Example: 1D Gaussians

$$\alpha = \mathcal{N}(0, 1) \quad \beta = \mathcal{N}(\Delta, 1)$$

Takeaway: All three have same general behavior, but SD_ϵ removes bias, tracks OT
