

Displacement interpolation (t=0.00)

Euclidean (grid) interpolation (t=0.00)

Euclidean (grid) interpolation (t=0.00)

Euclidean (grid) interpolation (t=0.00)

Displacement interpolation (t=0.00)

Displacement interpolation (t=0.00)

Linear vs Displacement Interpolation

2D example, Eulerian Discretization (grid) ~ histogram view of grayscale image

Euclidean (grid) interpolation (t=0.00)

Displacement interpolation (t=0.00)

Example: Gaussian $\rightarrow$ Gaussian

$$\alpha = \mathcal{N}(m_0, \sigma_0), \beta = \mathcal{N}(m_1, \sigma_1)$$

Mean evolves linearly:

$$m_t = (1 - t)m_0 + tm_1$$

Standard deviation evolves linearly:

$$\sigma_t = (1 - t)\sigma_0 + t\sigma_1$$
