

Particle trajectories (progressively drawn)

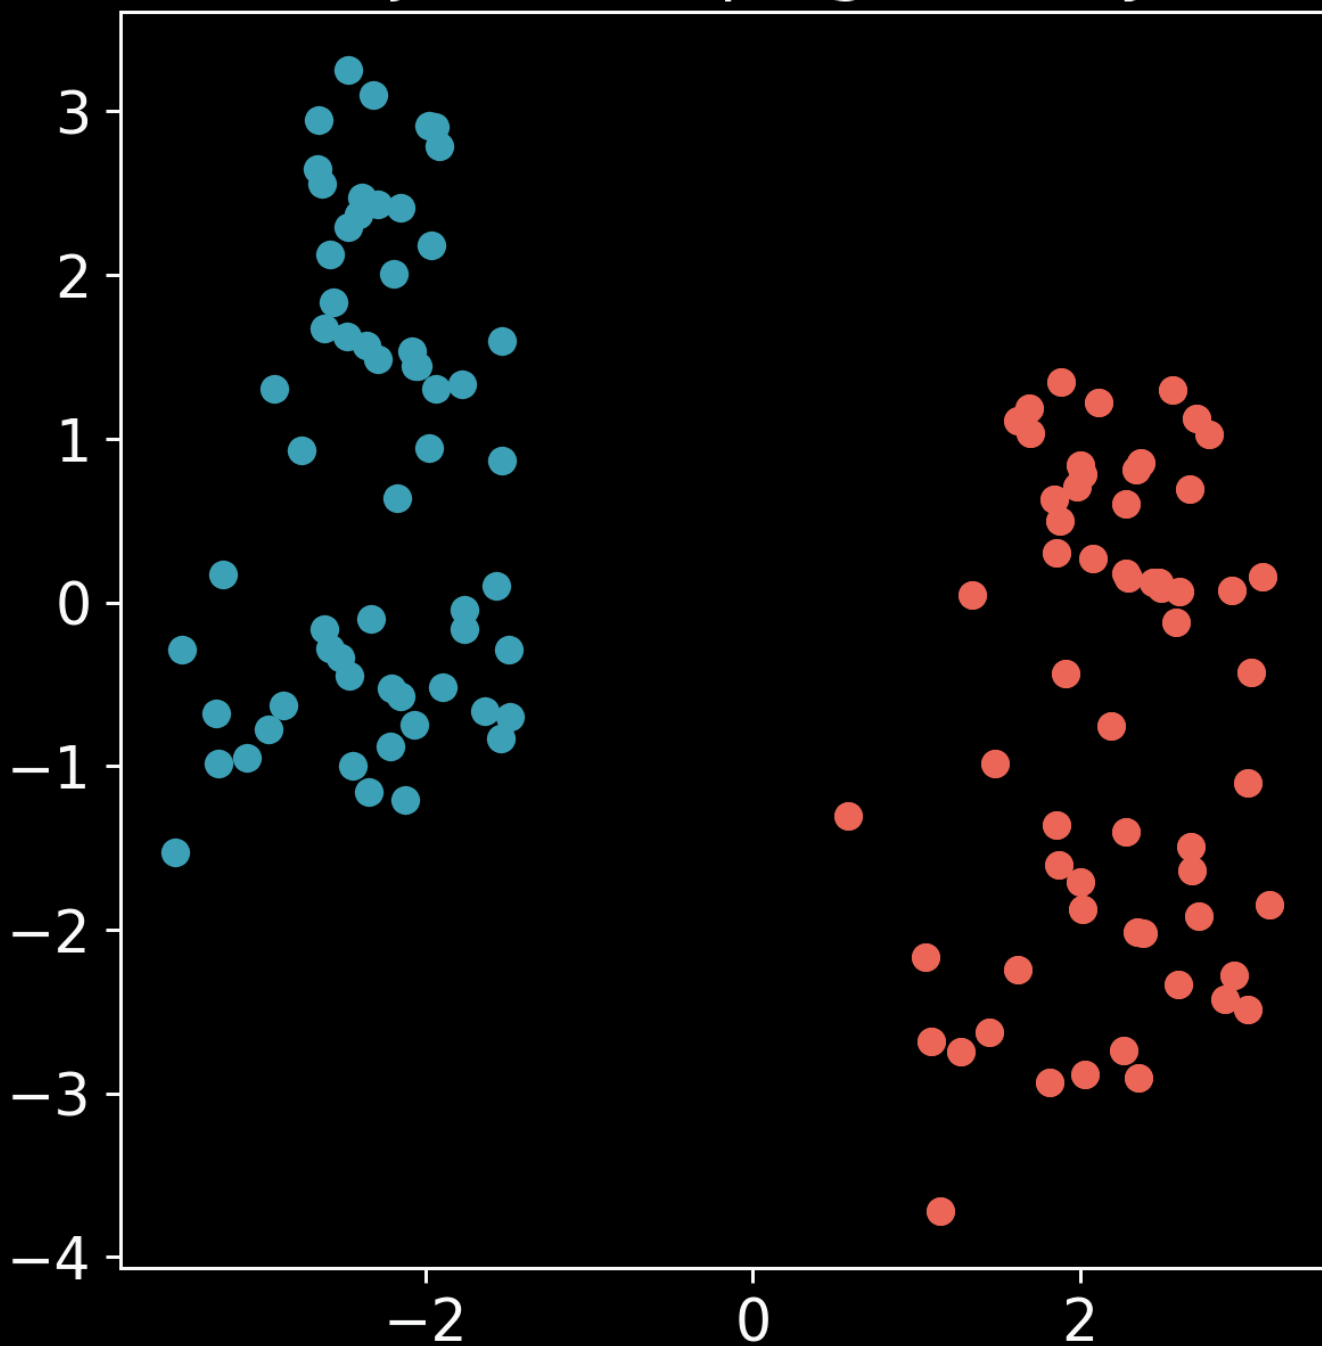

Particle trajectories (progressively drawn)

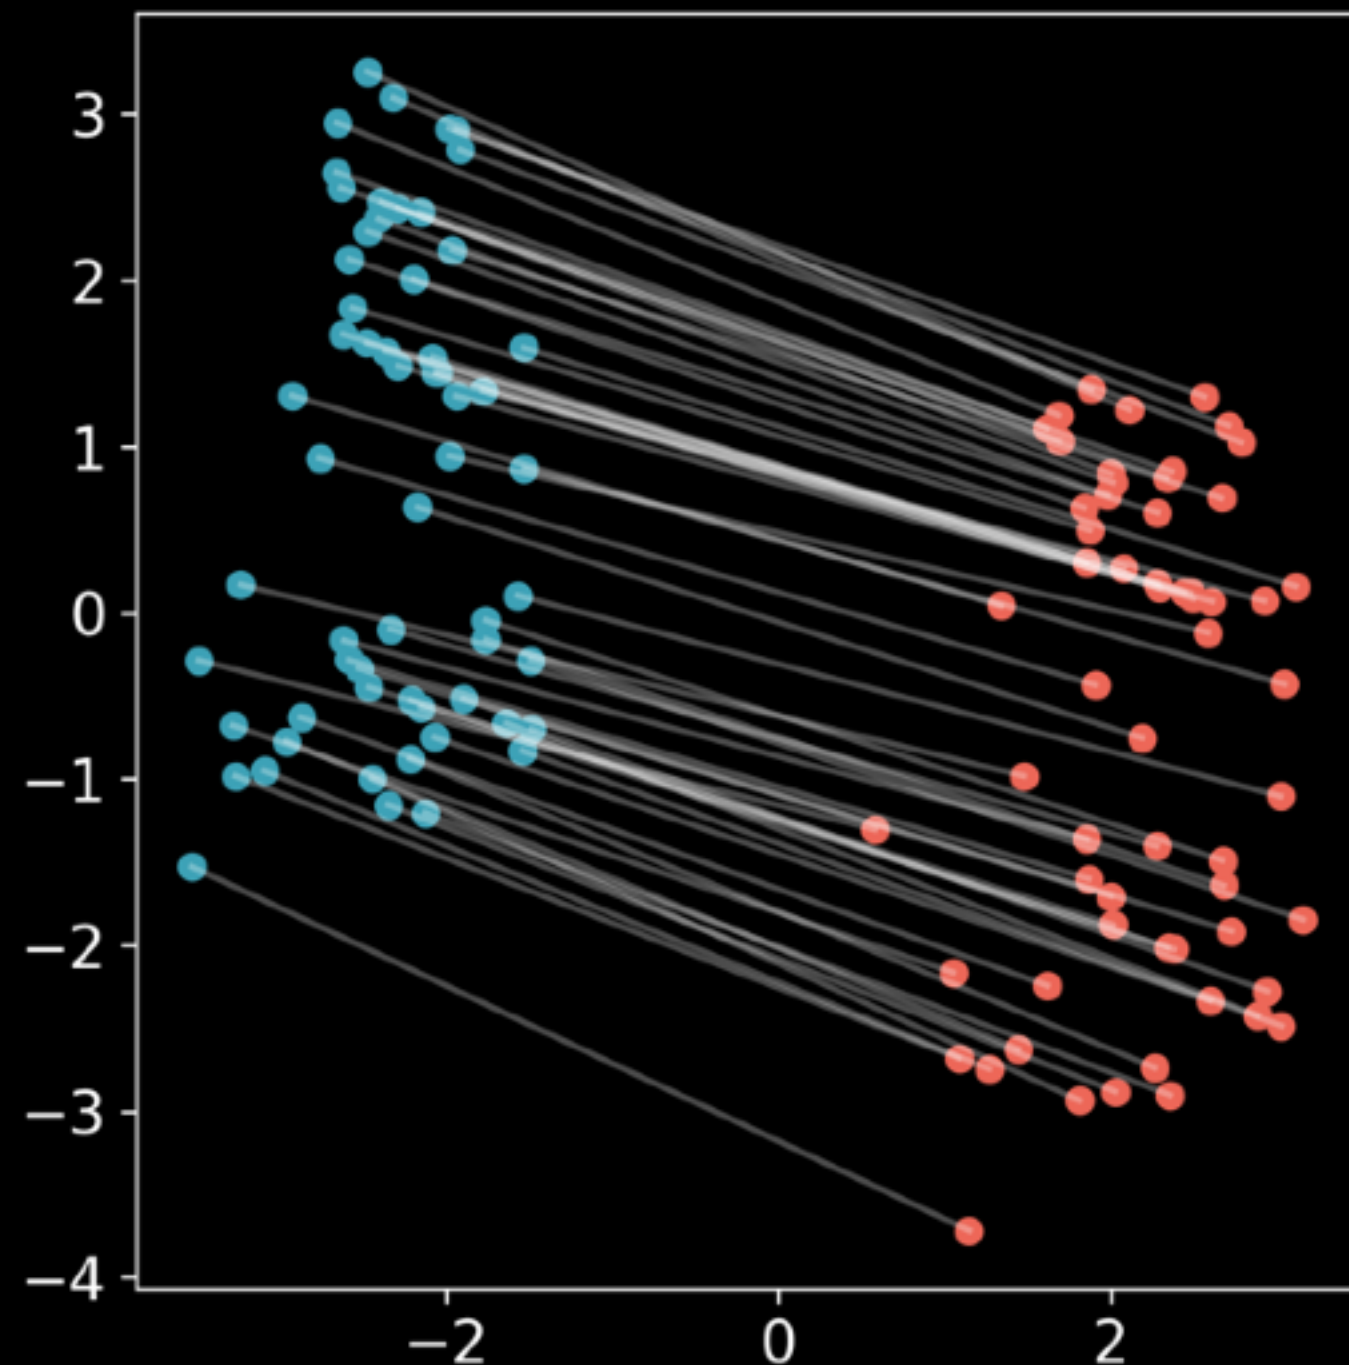

Particle trajectories (progressively drawn)

Intuition: Discrete/Particle View

Static OT

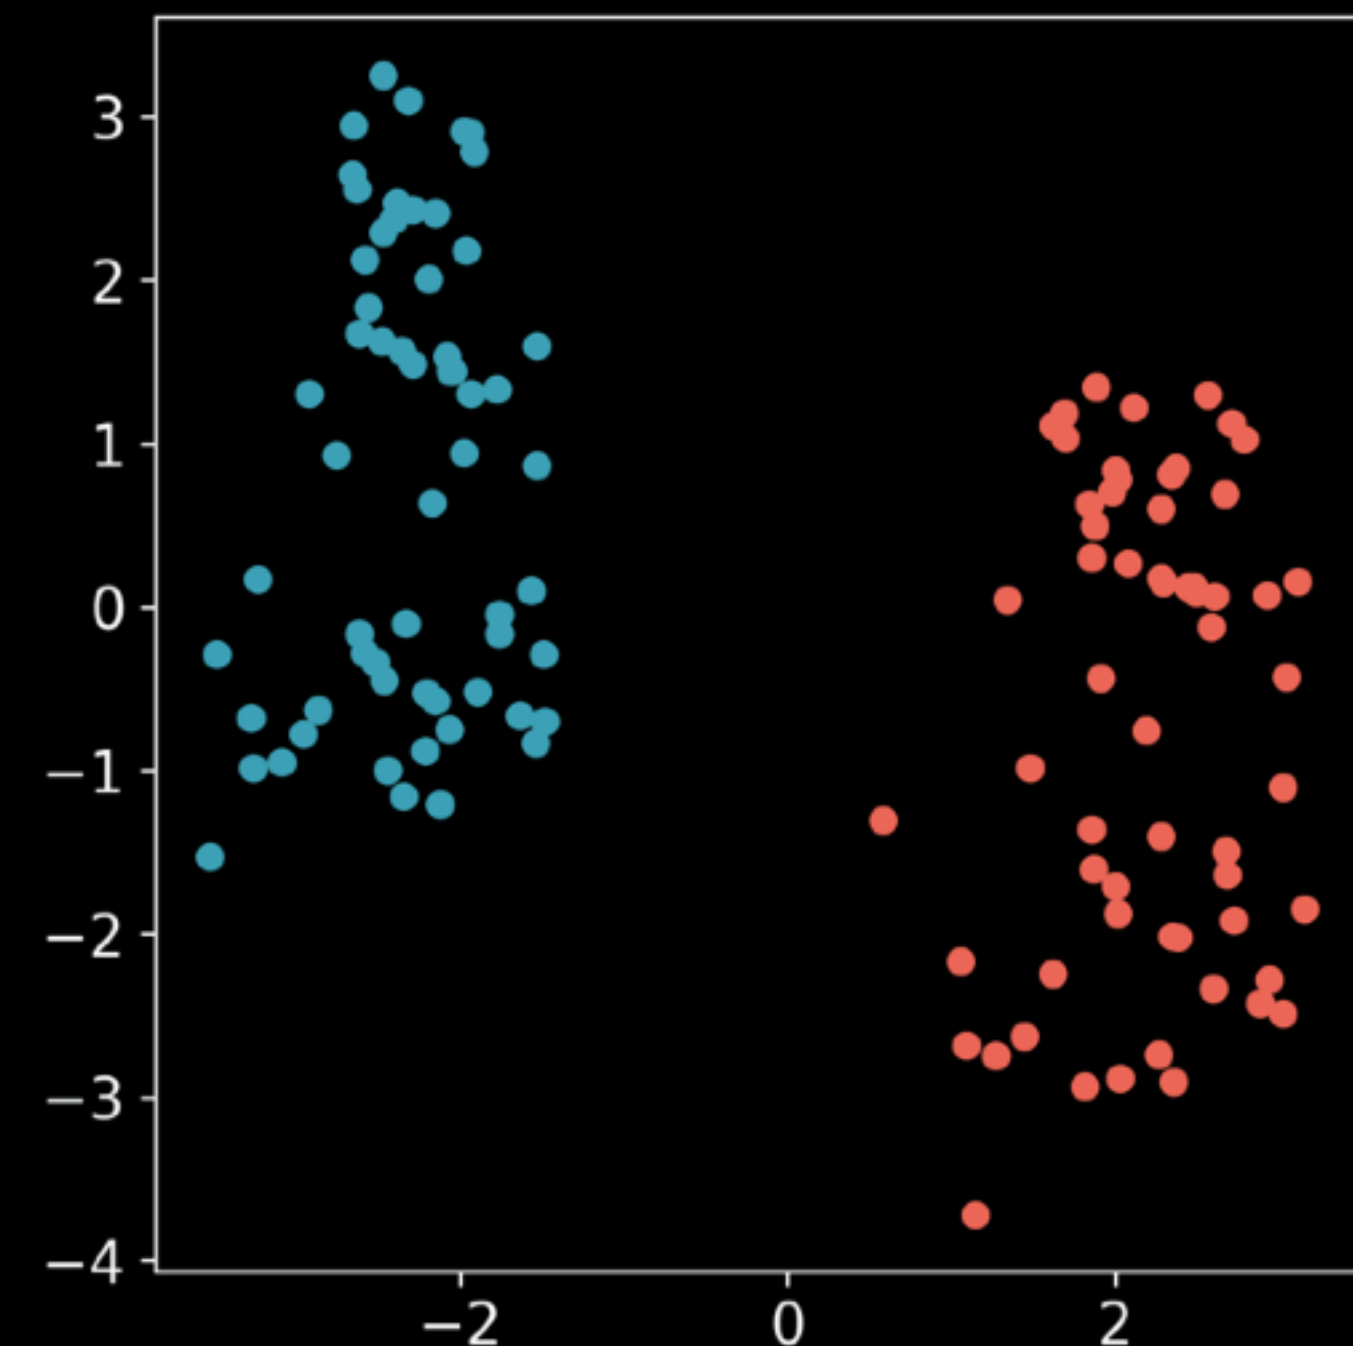

Assigns pairs (x, y)

Each particle matched with other particle(s);
ensemble of pairs defines joint distribution π

Dynamic OT

Describes trajectories $x \mapsto x_t$

Each particle follows straight line; ensemble
of particles evolves as ρ_t

Computational Aspects (Overview)

- PDE-constrained optimization problem.
- Two main discretization strategies:
