

$$\alpha = \delta_0$$

$$\rho_t$$

$$\beta = \delta_1$$

Example: 1D Dirac Measures

- Transport $\alpha = \delta_0$ to $\beta = \delta_1$
- Dynamic path: $\rho_t = \delta_t$, $v_t \equiv 1$
- Energy: $\int_0^1 \int v_t^2 \rho_t(x) dx dt = 1$
- Matches static OT cost: $\text{OT}(\delta_x, \delta_y) = d(x, y) = 1$

OT as Geodesics
