

Gromov-Wasserstein: Application

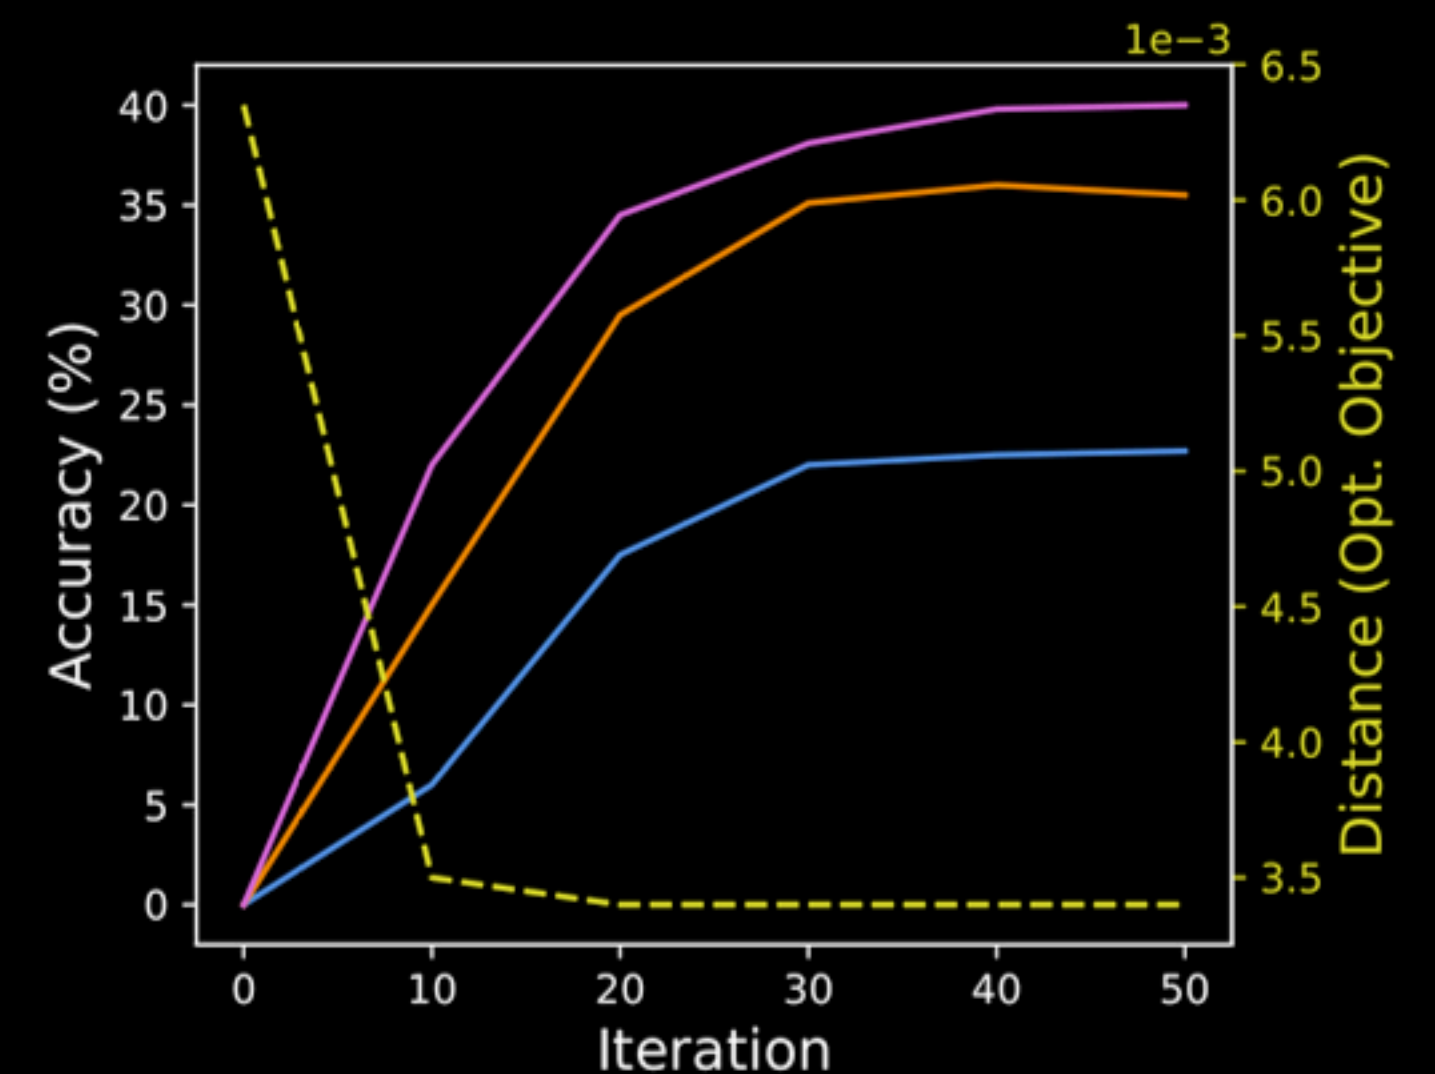

GW distance is a good predictor of downstream translation accuracy

(a) EN → FR, 15K words, $\lambda = 5 \cdot 10^{-4}$

(b) EN → FR, 15K words, $\lambda = 10^{-4}$

(c) EN → RU, 15K words, $\lambda = 10^{-4}$

Gromov-Wasserstein: Application

GW alignment yields good results at the fraction of the cost of adversarial methods
